- Full-time pressurized oiling to feed the bearing
- Full-time pressurized oiling to feed the pushrod
- Flat face on pushrod oil port enhances oil flow to pushrod
- Pro series Tie Bar button
- REM finish
- Made in Cleveland, OH

## Oil Flow Diagram

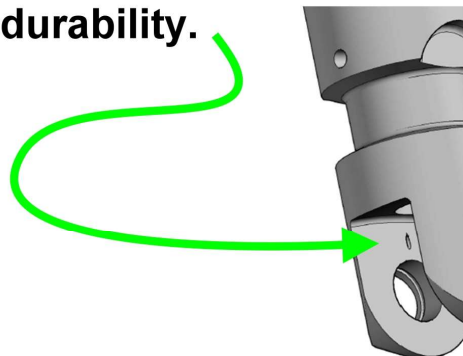

The milled notch allows oil flow  
on small base circle cams.

Oil enters this  
port to lubricate  
the Pushrod.

Full time pressurized oil enters  
the body and exits into the  
bearing to enhance durability.

The flat face allows  
oil to quickly enter the  
oil port of the lifter.
